

SAFE AND SOUND

E 870PDD / E 850PDD

The finish and technical solutions of E 870 and E 850 equal that of much more expensive Jamo products. E 850 features a 2 1/2-way system that gives you the coherent sound picture from a 2-way system, as well as the extra bass of a 3-way system. E 870 has its own midrange driver and is a pure 3-way system. The exceedingly clear, dynamic performance brings a sheen and brilliance to music that most systems would be hard-pressed to match. The design makes it elegant enough to join any club.

The surround add-on offers a transparent and life-like window to the world of music and movies. E 8SUB is mounted with a 10" woofer for the lowest frequencies, while the special SLD (Supply and Load Dependent) limiter ensures that bass reproduction is always clean and effortless. E 8SUR hangs discreetly on a wall and is equipped with MPD (Midrange Phase Diffusion) technology. The centre speaker completes a system that produces a perfect sound stage while virtually disappearing in the room.
